

Collector

Collector Installation Guide

How to run collector JAR file

File Path of collector

Application.yaml file

Application Name- CIQDashboard -JiraZephyr-collector

Collection name -issues, data

Zephyr Server:

URL: "https://prod-api.zephyr4jiracloud.com/connect"

Jira Server:

url: "https://sparshs.atlassian.net/rest/api/latest"

token: " "

projects: SAM, AC, MMT

period: 111

PORT-8088

Jasypt:

encryptor:

algorithm: PBEWITHHMACSHA512ANDAES_256

password: LeapSecurityKey

```
bean: JasyptEncryptorBean
```

Authentication Type: Bearer Token

```
1 spring:
2   application:
3     name: cliDashboard-jiraZephyr-collector
4   data:
5     mongodb:
6       uri: mongodb://localhost:27017/cliDashboard_qa_2023
7   credentials:
8     collection:
9       issue: issues
10      execution: data
11
12 logging:
13   level:
14     com.cognizant.collector.jira.client.JiraClient: Off
15
16 pattern:
17   console: '%d{dd-MM-yyyy HH:mm:ss.SSS} %magenta([%thread]) %highlight(%-5level) %logger.%M - %msg%n'
